The Florida Engineering Education Delivery System (FEEDS) is a cooperative effort of Florida public universities. FEEDS was established in response to the need for quality programs and extended studies in engineering in geographic areas where a college of engineering is not located. The colleges of engineering providing programs to the FEEDS network are Florida A&M University/Florida State University, Florida Atlantic University, Florida International University, University of Central Florida, University of Florida, and University of South Florida. UWF and the University of North Florida serve as cooperating centers in the network.

FEEDS courses may be taken for credit toward a master's degree or for personal development.

FEEDS Programs Available

FEEDS delivers course work to support all engineering graduate degree programs and some undergraduate degree programs offered by Florida public universities. These programs include:

- Chemical Engineering
- Civil Engineering
- Computer & Information Sciences
- Electrical Engineering
- Engineering Management
- Environmental Engineering
- Industrial Engineering
- Mechanical Engineering

Selected course offerings are also available in other engineering disciplines. Additional courses and degree programs may be added as demand arises. For additional information contact the FEEDS Center.
