The Pre-Dental Program is a seven year combined B.S., D.M.D. program designed to provide the applicant dual acceptance into the University of West Florida and the University of Florida College of Dentistry near the time of initial matriculation in college. Prerequisite courses to meet the departmental baccalaureate degree requirements and the College of Dentistry's admission requirements are completed during the first three years. Credits from the basic science portion of the Dental Program are transferred back to the University of West Florida to complete the bachelor's degree requirements. Approved students spend three or four years at the University of West Florida and then attend the University of Florida Dental School until the D.M.D. is awarded. Undergraduate majors in Biology and Chemistry/Biochemistry have been developed.

The Honors Combined B.S./D.M.D Degree Program is one that allows provisional acceptance into the University of Florida College of Dentistry to outstanding high school students at the time they are entering college.

- A. Students apply to the University of West Florida during the senior year of high school.
- B. Students apply for the Joint Program by July 1.
- C. Candidates who meet the criteria of the Dental School Admissions Committee are interviewed at the University of Florida College of Dentistry during the Fall term.
- D. Provisional acceptance into the program is offered in the middle of January, after fall grades are evaluated.

Note: The Pre-Dental Program is currently being reviewed. The current status may be obtained from the contact listed above.
